

ABSTRACT OF THE DISCLOSURE

[Abstract]

[Problem] It is an object to provide an organic waste processing method and apparatus capable of making a formalin nontoxic and decreasing an amount and/or a volume of a formalin-fixed organic waste easily in a shorter time without retaining an original form.

[Solving Means] A formalin-fixed organic waste processing method comprising the steps of formalin neutralizing a formalin-fixed organic waste, decomposing the waste using an enzyme, and subsequently, carrying out a drying process, and an organic waste processing apparatus comprising a processing chamber 2 for processing the waste, a stirring paddle provided in the processing chamber 2, a driving motor of the paddle, a heater 5 for the processing chamber 2, air supply means 6, exhaust means 14, and control means 7 for controlling the operations of the driving motor, the heater 5, the air supply means 6 and the exhaust means 14.
